Eyebrow Feathering

The answer to your perfect brow!

Eyebrow Feathering is a semi permanent tattoo using a manual hand tool and microblade to implant plant derived pigments into the skin. No tattoo machines used. Hairstrokes are etched into the superficial layer of the skin, which heals to resemble natural hair. This technique looks natural and light and does not have a result of a cosmetic tattoo which can look bold and dull. Feathering is performed over two treatments to ensure perfection of the overall result. Feathering can last from 12- 18 months dependant on your skin type and a retouch is recommended every 12 months. The treatment is quite comfortable as topical numbing agents are used to ensure client comfort is at it's highest.
